

### **WATER TREATMENT PLANT VISIT**

The students of third year accompanied by two staffs visited the water purification plant on 2<sup>nd</sup> April, 2018. The staffs of the plant explained all the procedures and techniques adopted in the plant. They have seen the flocculation chamber, mixing chamber, sedimentation tanks and both type of filters (slow sand and rapid sand). The staff showed the backwashing procedure also for the students. Later, students spent time in the ajwa garden and that too made the visit memorable. Overall, it was a very informative and interesting visit and it will surely enhance their academic knowledge.
